

PAPER DESIGN[®]
Non-flammable paper architecture

About Us

Paper Design® is an innovator in the development of event design, decorative and camouflage ceiling systems, and art objects in Russia and other countries around the world. The company is a leader in combining tradition and technology in the design of spaces such as:

- Offices and lobbies
- Shops and Shopping Malls
- Restaurants, cafes and bars
- Swimming pools, SPA and fitness centers
- Residential complex halls and reception
- Hotels and Resorts
- Exhibition stands
- Cinemas and concert halls
- Events
- Galleries and museums

Our material is non-woven architectural paper.

Characteristics:

- Density 60, 88, 137 gr.
- Transparency 40-70%
- Fire safety certificate
- Anti-static
- Sound absorption
- Lightness
- Environmental friendliness
- Can be painted and textured

More than **1,200** projects implemented

About **30 000 m2** of ceiling areas decorated

More than **150 000 m2** of material used

Our material – «architectural paper»

This is **not paper**.

At first glance — it looks like paper.

But it's not.

It's a **high-tech, non-woven material** — made from cellulose, fiberglass, and special binding components.

And here's what's important:

Only **ONE** company in all of Europe produces it.

So... why is it perfect for our projects?

First — it's ultra-lightweight

Our ceiling systems weigh no more than 200 grams per square meter of distributed surface area.

That means:

- No heavy suspension systems
- No extra load on the building's structure
- Easy and fast to install

But we take it even further:

We make all mounting systems practically invisible.

Profiles?

Always painted to match the final ceiling finish

You might think hanging something that looks like paper is easy...

It's not.

It requires knowledge, technique — and 15 years of experience.

Second — fire safety

The material is non-flammable.

It holds:

- M1 certification in Europe
- KM1 certification in Russia

You can even test it yourself.

Third — it's light-transmitting

That opens up incredible potential for integrated lighting.

And lighting is not just an addition — it's part of the concept.

Used right, it brings the whole space to life.

And we know how to do that right.

Fourth — eco-friendliness

Fully ISO-certified.

Safe for people.

Safe for the planet.

100% recyclable.

Fifth — adaptability.

Different densities.
Different forms.
Every project needs its own
configuration.
And we know how to choose the
right one — that's where
expertise matters.

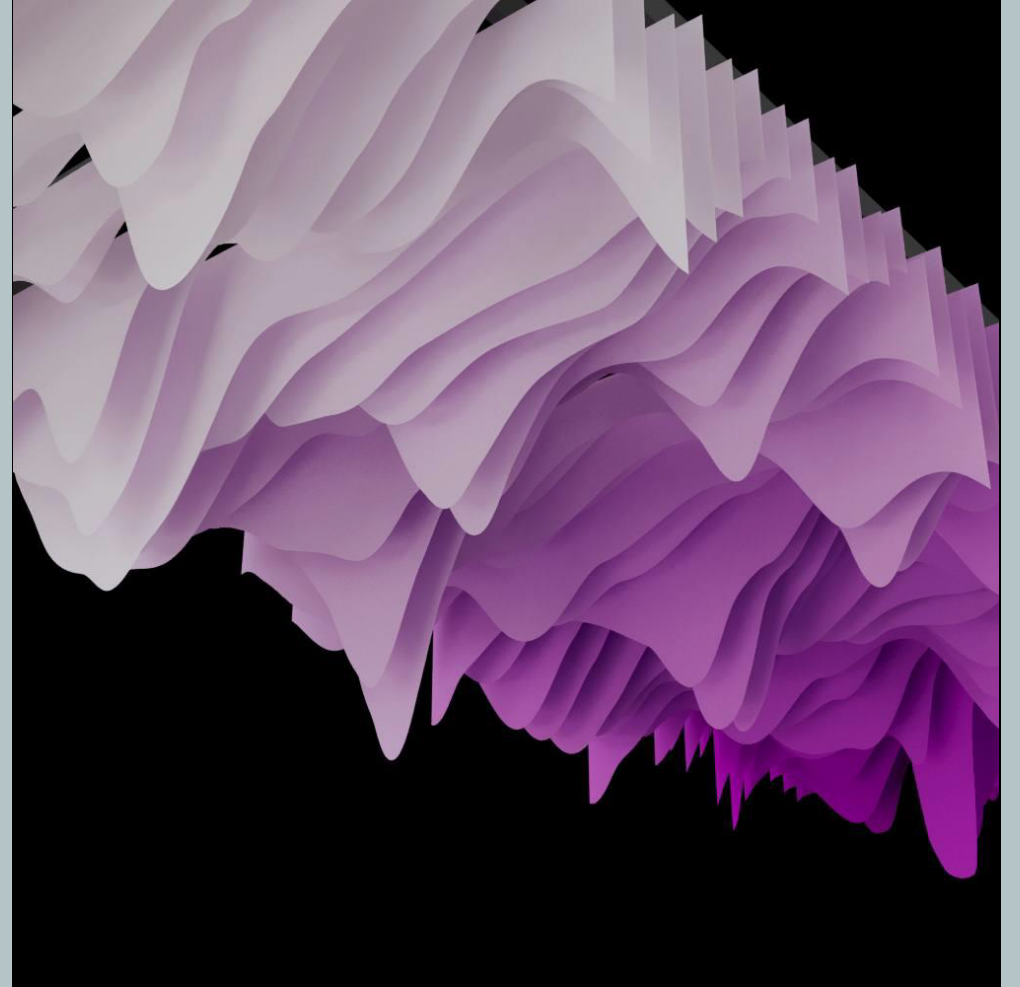

And finally — our mission

We **don't follow** trends.
We **create** them.

This year, our lab is launching something with no analogues in the world:

- Living ceilings
- Kinetic models
- Kinetic art installations

You can already have this in your project!
